Children's Hospital Boston

Residency and Fellowship Training Programs

Residency and Fellowship Programs

Our postgraduate residencies and fellowships ensure quality training for physicians

Boston Combined Residency Program in Pediatrics (BCRP):

The Boston Combined Residency Program in Pediatrics brings together Children's Hospital Boston, which is the nation's leading research and pediatric training institution, dedicated to the care of children with unusual and complex medical problems, and the Boston Medical Center, which has a long and important history of clinical research, advocacy, public policy and training in community pediatrics. Program Director: Theodore Sectish, MD theodore.sectish@childrens.harvard.edu Director of Internship Selection: Samuel Lux, MD lux@enders.tch.harvard.edu www.childrenshospital.org/bcrp/

Minority Physician Training Project

Within the BCRP, the *Minority Physician Training Project* was created to enhance the professional development of minority physicians and to provide outreach to underserved communities. *Welcome Dinners* prior to the interview day encourage applicants to meet with Children's faculty and housestaff to discuss the residency program.

Children's Hospital Boston also participates in many other cross-hospital residencies that integrate pediatric care within other specialties.

Child Neurology Residency

The Department of Neurology accepts four new residents into its advanced training program each year. Applications are accepted at least 3 years prior to start date.

Basil Darras, MD
basil.darras@childrens.harvard.edu

Harvard Brigham and Women's/Children's Hospital Boston Internal Medicine-Pediatric Residency

This combined residency provides residents with a 6 month program at each hospital each year. Participants will gain experience in intensive care, emergency room, and ward protocols.

Program Director: Niraj Sharma, MD
Nsharma5@partners.org

Neurological Surgery Residency

Mark Proctor, MD
mark.proctor@childrens.harvard.edu
The Children's Hospital Boston/Brigham and Women's Hospital Neurological Surgery program includes cases seen in a major adult neurosurgery center as well as the highly specialized cases seen at a pediatric hospital. Residents will combine surgical experience with clinical and basic research.

Dr. Lovejoy meets with residents

Children's Training Programs

Build your medical career at Children's! Our programs provide subspecialty training and research opportunities for physicians who have completed residency requirements.
