

Do you know someone with autism who has sleep problems or seizures (epilepsy)? Join us and learn more.

Sleep Disorders and Epilepsy in Children with ASD

Sarah Spence, M.D., Ph.D.

(Director, Autism Program, Department of Neurology)

Ronald E. Becker, M.D.

(Staff Physician, Division of Developmental Medicine)

Wednesday, April 24th

6:00-8:00 pm

**Folkman Auditorium, Enders Building
Boston Children's Hospital**

Children with autism spectrum disorders are at an increased risk of having seizures or sleep disruption. While many children with autism spectrum disorders will never experience seizures or sleep disruption, understanding these issues will be helpful to parents. This seminar will address the approach to these concerns and what is currently known about how they present in children and young adults with autism spectrum disorders. Each topic will be covered separately with a portion of the time spent in discussion of how the two also can overlap.

Both family members and professionals are welcome!

Free parking available at the main BCH parking lot across the street. Parking vouchers will be distributed at event.

Please RSVP to Rosetta Mojahed-Dacey at
rosetta.mojahed-dacey@childrens.harvard.edu or 617-355-1933.
