Type of Research: (doubleclick on box)

Basic

Translational

Clinical

Translational Research is the translation of observations made in research laboratories and clinical services into clinical studies involving humans, and/or the use of clinical observations to define basic research studies or the use of clinical material in basic laboratories.

* Career Development Fellowships follow the general standard adopted by the Association of American Medical Colleges (AAMC) and also used by HMS: "underrepresented in medicine means those racial and ethnic populations that are underrepresented in the medical profession relative to their numbers in the general population," and may include individuals who identify themselves as Black or African-American, Hispanic or Latino, Native American, Alaska Native, Southeast Asian or Pacific Islander.
