

SUBJECT SELECTION – ADDENDUM: SPSS Random Subject Selection

SPSS Random Subject Selection Instructions

1. Determine number of desired subjects (refer to selection criteria in #III.B.8).
2. Open SPSS program
3. Click “*Open Existing Data*”, open ‘Subject Randomization’ file
4. In the Data View page, enter all subject IDs
5. At the top of the screen, click ‘Data’, the ‘Select Cases’
6. Select ‘Random Sample of Cases’, the click ‘Sample’
7. In the Sample Size window, select ‘Approximately’ and enter 20% or “Exact’ and enter specific number, then click ‘Continue’, then click ‘OK’.
8. The filter will randomly select subjects. Selected subjects are marked with a 1
9. Save SPPS file using PI name and Subject Selection
10. Print and file in EQuIP file.
