Exemptions

Policy

- In accordance with federal regulations 45 CFR 46 and 21 CFR 50 and 56, Boston Children’s Hospital allows specific categories of research to be exempt from human subject review. Any research that falls within these categories must also present minimal risk and not subject to any state laws that would prohibit and exemption. Of these categories, category 6 (below) is the only one that is permissible if the research falls under Food and Drug Administration regulation.

- The Director of Clinical Research Compliance, Assistant Director, or an IRB Chair may determine that a human subject activity is exempt from IRB review.

- The exemptions do not apply to research that involves prisoners. See IRB policy Human Subject Research: Prisoners for additional information about studies that involve prisoners.

- The exemption category for research that involves survey or interview procedures or observations of public behavior does not apply to children except for research involving observation of public behavior when the investigator does not participate in the activities being observed.

Purpose

The Purpose of this policy is to outline the process for determining that an activity is exempt from human subject review, and to list the specific federal regulation categories that Boston Children’s Hospital accepts as exempt.

Procedure

1. Accepted Exemption Categories

Boston Children’s Hospital will exempt from human research review only those research activities that involve human subjects that, fall within one or more of the specified exempt categories. These categories are listed below. Categories considered exempt from IRB review are as follows:

Category 1

Research conducted in established or commonly accepted educational settings, involving normal educational practices, such as (i) research on regular and special education instructional strategies, or (ii) research on the effectiveness of or the comparison among instructional techniques, curricula, or classroom management methods.
Category 2
Research involving the use of educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures or observation of public behavior, unless: (i) information obtained is recorded in such a manner that human subjects can be identified, directly or through identifiers linked to the subjects; and (ii) any disclosure of the human subjects' responses outside the research could reasonably place the subjects at risk of criminal or civil liability or be damaging to the subjects' financial standing, employability, or reputation.

For research that involves children as subjects, no exemptions are allowed under (b) when subjects are involved in observations in which the investigator participates in the activities being observed.

Category 3
Research involving the use of educational tests (cognitive, diagnostic, aptitude, achievement), survey procedures, interview procedures, or observation of public behavior that is not exempt under paragraph (b)(2) of this section, if:

(i) the human subjects are elected or appointed public officials or candidates for public office; or
(ii) federal statute(s) require(s) without exception that the confidentiality of the personally identifiable information will be maintained throughout the research and thereafter

Category 4
Research involving the collection or study of existing data, documents, records, pathological specimens, or diagnostic specimens, if these sources are publicly available or if the information is recorded by the investigator in such a manner that subjects cannot be identified, directly or through identifiers linked to the subjects.

Category 5
Research and demonstration projects which are conducted by or subject to the approval of federal department or agency heads, and are designed to study or evaluate:

- Public benefit or service programs;
- Procedures for obtaining benefits or services under those programs;
- Possible changes in or alternatives to those programs or procedures; or
- Possible changes in methods or levels of payment for benefits under those programs.

OHRP has determined that the following criteria must be satisfied to invoke the exemption for research and demonstration projects examining "public benefit or service programs" as specified under Department of Health and Human Services (HHS) regulations at 45 CFR 46.101(b)(5):

(1) The program under study must deliver a public benefit (e.g., financial or medical benefits as provided under the Social Security Act) or service (e.g., social, supportive, or nutrition services as provided under the Older Americans Act).

(2) The research or demonstration project must be conducted pursuant to specific federal statutory authority.

(3) There must be no statutory requirement that the project be reviewed by an Institutional Review Board (IRB).
The project must not involve significant physical invasions or intrusions upon the privacy of participants.

The funding agency must be contacted and provide approval to utilize this exemption category.

**Category 6**

Taste and food quality evaluation and consumer acceptance studies, (i) if wholesome foods without additives are consumed or (ii) if a food is consumed that contains a food ingredient at or below the level and for a use found to be safe, or agricultural chemical or environmental contaminant at or below the level found to be safe, by the Food and Drug Administration or approved by the Environmental Protection Agency or the Food Safety and Inspection Service of the U.S. Department of Agriculture.

**Exemption Review Process**

1. If an investigator believes that a study meets the criteria for exemption, the principal investigator (PI) is asked to submit an IRB protocol using the “Request for Exemption” submission type SmartForm in CHeRP. Investigators who are requesting an exemption for category 4 (existing specimens or data) are asked to instead submit an IRB Protocol using the "New Research Activity Limited to Excess Human Biological Material and/or Review of Health Information on Patients" submission type SmartForm in CHeRP. These applications are to be submitted for confirmation of their exempt status by the IRB. Exemption determinations are not to be made by researchers or by others who might have a conflict of interest regarding the studies in question.

2. The form asks for a brief summary of the research, and asks the investigator to indicate under which category the research is exempt.

3. The Statement of Exemption Form is reviewed by the Director of Clinical Research Compliance, Assistant Director, IRB Manager, or an IRB Chair. The reviewer will review the application to determine:
   - Risks to subjects are minimized.
   - There are adequate protections for privacy and confidentiality.
   - Whether some form of informed consent should still be obtained.
   - If necessary, subjects and/or the research will be appropriately monitored.
   - Whether any ethical concerns exist.
   - Whether the request meets the exemption criteria.

4. If the reviewer determines that the activity is exempt from review, the Statement of Exemption Form/discarded specimen/existing medical record/database form is approved. a tracking number will be assigned, and the investigator will be notified and provided with any necessary comments.

5. Once a research study has been certified as exempt, annual reviews are not required; however, investigators are asked on an annual basis to report whether the research is still ongoing and whether all activities still remain exempt.
   - Modifications that fall outside of the exemption categories will require review by the IRB.
   - Exempting an activity from review does not absolve the investigator from ensuring that the welfare of the subjects who participate in the research is protected, and that the methods used and the information provided to gain subject consent are appropriate to the activity. The Director of Clinical Research Compliance or the IRB...
Chair may still require that a form of consent be obtained, or other safeguards put in place, to protect the human subject.

6. It is the investigator’s responsibility to notify the IRB of any changes or modifications that are made to the study’s design, procedures, and so on, that do not fall within one of the categories exempted from the regulations.
