Reportable Events: Unanticipated Problems and Adverse Events Involving Risks to Research Subjects and Others
Policy/Procedure

Internal Approval
SVP, Research
EVP & Chief Scientific Officer, Research

Scope
This policy is to assist Principal Investigators (PIs) in understanding their obligations to report events that pose unanticipated problems that involve risks to subjects or others.

Definitions

Unanticipated Problem Involving Risks to Subjects or Others (UP): Any event that:

1. Is unanticipated, not expected given the nature of the research procedures and the population being studied and
2. Suggests that the research places subjects or others at a greater risk of harm related to the research than was previously known or recognized.

Possibly Related Problem to the Research: An event is possibly related to the drug, device, or intervention if there is a reasonable possibility that the event may have been caused by the research protocol, even if there is insufficient information to determine the likelihood of this possibility.

Related/Probably Related Problem to the Research: An event is determined to be definitively related to the use of the drug, device, or intervention, or there is a reasonable probability that the event may have
been caused by the drug, device, or intervention. A related or probably related event has a strong
temporal relationship to the study protocol and an alternative etiology is unlikely or significantly less
likely.

**Policy Statements**

Federal regulations 45 CFR 46.108(a)(i) and 21 CFR 56.108(b)(1) require Institutional Review Boards
(IRBs) to have written procedures for ensuring prompt reporting to the IRB, appropriate institutional
officials, and the federal department or agency head of any unanticipated problems involving risks to
subjects or others. In keeping with this regulatory requirement, investigators are required to promptly
report to the IRB unanticipated problems involving risks to subjects or others.

To be defined as an *Unanticipated Problem that Involves Risks to Subjects or Others* the event must
meet all the following criteria:

1. **Unanticipated:** The event is unexpected or unforeseen in type, frequency, scope,
   consequences, or severity; or, if anticipated or referred to in part, is not fully addressed or
   specified within the initial protocol application, any amendments, consent forms, investigator
   brochures, minutes, and any existing documentation regarding the research conducted to date
   under the protocol.

2. **Potential for Risk: Caused Harm or Placed a Person at Increased Risk of Harm.** As a result of
   the event, participants or other individuals are either placed or are likely to be placed at
   physical, psychological, social, or emotional harm that has increased since the time the
   research was approved by the IRB.

3. **Problem Related to the Research:** The event, situation, or issue arises from the conduct of the
   research and is determined to be *possibly related* or *related/probably related* to the research
   and is of concern for the research participants or others directly affected by the research. Problems may:
   a. Be attributable to the conduct of the research or
   b. May result from failures or errors in general systems outside of the research, or
      factors that are not controlled by the researcher under the protocol, but on which
      ethical conduct of the research depends, according to the protocol.

Unanticipated problems that involve risks to subjects or others include not only materialized adverse
events and risks to persons who are not research subjects. Investigators should note that this definition
also includes problems that arise from general system failures that contribute to such risks, not simply
events that arise from the investigator’s conduct of the research according to the protocol.

**Additional Reporting Requirements**

This policy concerns only what needs to be submitted to the IRB and does not impact what investigators
need to record or document as part of their research records. There may be additional reporting
requirements.

Depending upon the protocol, the investigator may be required to report other events that are not
required by the IRB such as: the sponsor (e.g. NIH), Coordinating Center, Data Safety Monitoring Board
In addition, the annual IRB application for continuing review reports will ask if the risk profile has changed for the protocol and to summarize these events as part of the continuing review.

**Procedures**

The following information is provided to assist investigators in their obligations to report unanticipated problems that involve risks to subjects or others:

**Criteria and Timeline for Reporting**

The following events require reporting to the IRB within 72 hours of the occurrence of the event or notification to the PI or research team of the event:

1. **DEATH** of research subject thought to be either related to research study or possibly related to research study.

2. **UNANTICIPATED ADVERSE DEVICE EFFECT (UADE)** that result in the death of a research subject.

3. **TERMINATION OR SUSPENSION** of the study by the sponsor, DSMB or federal agency overseeing the research due to a safety issue.

The following events require reporting to the IRB within 5 business days of the occurrence of the event or notification to the PI or research team of the event:

1. **ADVERSE EVENT**: Both must apply in order to be reportable:
   a. **Unexpected** (in terms of nature, severity, or frequency) given the research procedures that are described in the protocol-related documents, such as the IRB approved research protocol and informed consent document; and the characteristics of the subject population being studied, and
   b. **Related or possibly related** to a subject’s participation in the research.

2. **UNANTICIPATED ADVERSE DEVICE EFFECT (UADE)**: Any serious adverse effect on health or safety, any life-threatening problem or death caused by or associated with a device, if that effect, problem, or death was not previously identified in nature, severity, or degree of incidence in the application; or any other unanticipated serious problem associated with a device that relates to the rights, safety, or welfare of subjects.

3. **MEDICATION OR LABORATORY ERRORS** that have or could have caused risk to subjects or others. This includes if there is an error or an overdose of a drug or biologic administered as part of a research protocol or a miscalculation of a drug dose; a mix-up that results in a wrong drug being administered (e.g., placebo instead of intervention drug).

4. **BREACH OF CONFIDENTIALITY/HIPAA VIOLATION** resulting from disclosure of confidential information or identifiable private information or loss/stolen confidential information (i.e. lost laptop, inadvertent email distribution).

5. **NONCOMPLIANCE/PROTOCOL DEVIATION**: Any violation of human subject research
regulation, institutional policy, or any conditions imposed by the IRB, or a deviation/departure from an IRB-approved protocol that has or had the potential to:
   a. Impact subject rights, welfare or safety of present, past or future subject(s), or
   b. Increase the risks and/or decrease the benefit for research subjects(s), or
   c. Compromise the integrity of the study data, or
   d. Affect the subject’s willingness to participate in the study.

6. **COMPLAINT**: A research related complaint by a research subject or any another person.

7. **INTENTIONAL CHANGE TO PROTOCOL WITHOUT IRB APPROVAL** to eliminate apparent immediate hazard to research subject(s).

8. **INTERIM FINDINGS, PUBLICATION OR SAFETY REPORT** – An interim safety report (including a Data and Safety Monitoring report), publication in the literature, report of interim results, or another finding that indicates an unexpected adverse change to the risks or potential benefits of the research.

9. **ENFORCEMENT ACTION** – An unfavorable audit report; suspension or disqualification of an investigator; FDA Form 483, or Warning Letter.

10. **INCARCERATION OF A RESEARCH SUBJECT** during study participation (Note: Required for regulatory purposes, so additional mandated IRB review can be accomplished for the participant to remain in the trial).

11. **REQUIRED PROMPT REPORTING**: An event that required prompt reporting to the sponsor or IRB in accordance with the protocol.

12. **OTHER**: Any other event that the PI thinks (or is unsure if it) may represent an unanticipated problem involving risk to subjects or others.

*Please note for reporting allegations of research misconduct, contact the Research Integrity Officer for Boston Children's: rio@childrens.harvard.edu or call the anonymous Compliance Department Hotline: 888-801-2805.*

**Events That Do Not Meet Reporting Criteria**

1. Events that do not meet the criteria as defined in this policy do not require submission to the IRB.

2. Events from protocols that are not conducted at Boston Children's Hospital but involve same drugs/devices do not need to be reported.

3. An unanticipated drug/device event only needs to be submitted for the protocol under which the event occurred unless the investigator determines that:
   a. The event impacts the risk/benefit assessment of other approved protocols and
   b. A change to the protocol and or consent are required.

It is important for investigators to remember that even if an event does not meet criteria for reporting to the IRB they must continue to meet their obligations to report events to the sponsor, the U.S. Food and Drug Administration (FDA), and the data safety monitor.
How to Report

In accordance with the criteria listed above, investigators are required to complete and submit to the IRB a Reportable Event form.

1. The form must be completed regardless of whether other forms (e.g. sponsor IND safety reports or CRO/monitoring reports, MedWatch reports, etc.) have already been completed.

2. Information such as a summary of the event, and/ or reports from the coordinating center or drug company may be attached and submitted with the form.

3. The form will ask the investigator to independently determine whether the event was thought to be related or possibly related to the research study.
   a. In some cases, the Principal Investigator may not agree with a sponsor’s assessment of the relationship between the study drug and the UP.
   b. If either the PI or the sponsor considers the event to be a UP, then a report should be filed. The contrary opinions can be elaborated in the report.

4. Any other individual (e.g. research staff, subject, IRB member, or the general public) may report an event, issue, or situation for a research protocol if they are concerned that it represents a potential unanticipated problem that involves risk to subjects or others. They can report their concerns to the IRB Chair, the Senior Director of Clinical Research Compliance, or the Institutional Official.

5. Incidents that may potentially be considered unanticipated problems that involve risk to subjects or others may also become apparent during continuing renewals, incidents of noncompliance, quality improvement initiatives and report, review of data and safety monitoring reports, protocol violations, deviations, complaints, concerns from subjects or family members, concerns raised by research staff or investigators, participant injuries, deaths, and hospitalizations.

Investigation and Evaluation of the Reports

Once a Reportable Event form is received by the IRB, the following actions will occur:

1. The Senior Director of Clinical Research Compliance will screen the submission to determine whether it meets the Criteria of Reporting.

2. The Senior Director will obtain initial feedback from the investigator when there are questions or additional information is required.
   a. Based on the information received, if there is any immediate concern that subjects already enrolled or subjects to be enrolled in the trial may be subject to immediate increased harm to their health, safety, or welfare, the IRB Chair will be immediately contacted.
      i. If necessary, the IRB Chair will require that the protocol be suspended or terminated. In most situations this will not be necessary.

3. IRB Chair Review: All submitted reportable events will be reviewed by the IRB Chair or Vice Chair who will determine if the event should be placed before the convened IRB.
a. The IRB Chair will review the event and ask for any associated documentation and/or information they feel necessary to understand and review the event.

b. The investigator will receive written notification as to whether the report was accepted, whether additional information or action is required or placed before the convened IRB for consideration.

4. Convened IRB review:
   a. Each event will be assigned a primary reviewer.
   b. At the IRB meeting the reviewer will report on the event to the full committee and determine whether any further action as listed below is required.
   c. All IRB members will receive a copy of the event form and have access to the entire protocol, approved consent and history through the CHeRP system.
   d. The IRB will make a final determination as to whether the event needs to be reported as an unanticipated problem involving risks to participants or others. If the IRB determines that the event is an unanticipated problem involving risks to participants or others, the event will be reported.
   e. The investigator will receive written notification as to whether the report was accepted, if additional information or action is required, and/or reporting is required.

Determinations Concerning Appropriate Remedies

In reviewing and addressing any unanticipated problem the IRB Chair or IRB may impose any remedy or take any action authorized by law or regulation, including:

1. Initiate immediate corrective action, if necessary.
2. Delegate a subcommittee or individual to perform further investigation.
3. Require that individuals who have already consented to participation be notified.
4. Require modification of any other aspect of the conduct of the research including recruitment, informed consent, research and clinical procedures, monitoring and safety assurance, and continuing review.
5. Alter the frequency of continuing review.
6. Require that enrolled subjects be provided with an amended informed consent form and that the process of providing for informed consent be repeated with revised information. This will be required whenever the information may relate to the participants willingness to continue participating.
7. Determine the protocol should be terminated or suspended.
8. Require the investigator to inform other research participants or individuals who may be affected by the event or problem.
9. Notification of investigators at other sites.
10. Observation of the consent process.
11. Refer concerns or findings to other parts of the organization that administer other policies, laws, and regulations.
12. Any other action necessary to resolve the incident and address the safety and welfare of current and future research subjects.
